

AeroBi | Version 3 Update

AeroBi Version 3 Update – Lost Time Report

What is Lost Time?

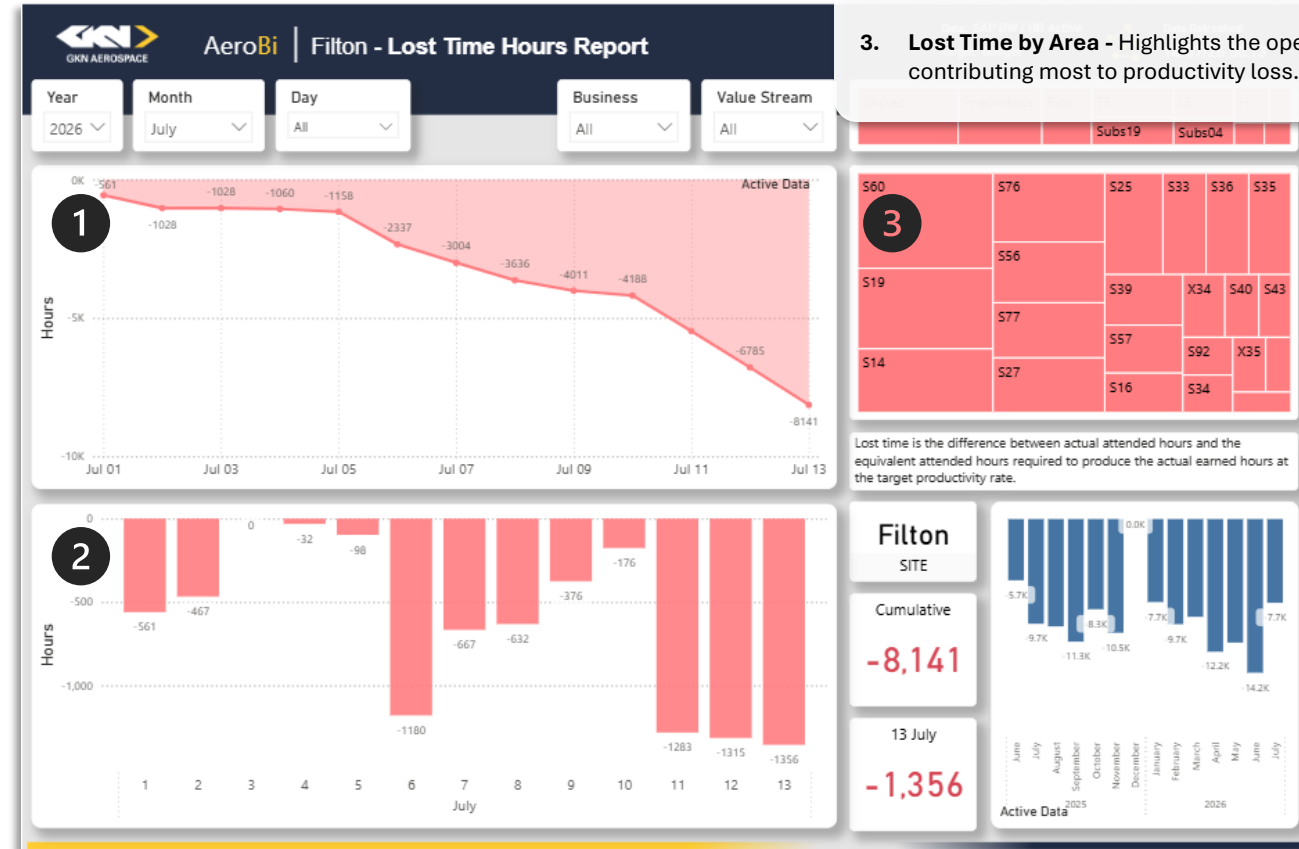

Lost Time is an hour of attendance that has been paid for and attended but has not generated productive output. This may be due to material shortages, machine downtime, rework, labour deployment challenges, process disruption, or other operational constraints.

Every hour of lost time impacts productivity and represents an opportunity for improvement.

Introducing the AeroBi Lost Time Dashboard

Leaders use lost time reporting to understand productivity losses and identify opportunities to reduce waste.

The new AeroBi Lost Time Dashboard provides visibility of lost time as it accumulates throughout the month, enabling earlier intervention, greater operational control, and reduced effort at month end.

Dashboard Features

- Cumulative Lost Time** - Tracks lost time accumulation throughout the month.
- Daily Lost Time** - Shows lost time as it occurs.
- Lost Time by Area** - Highlights the operational units contributing most to productivity loss.

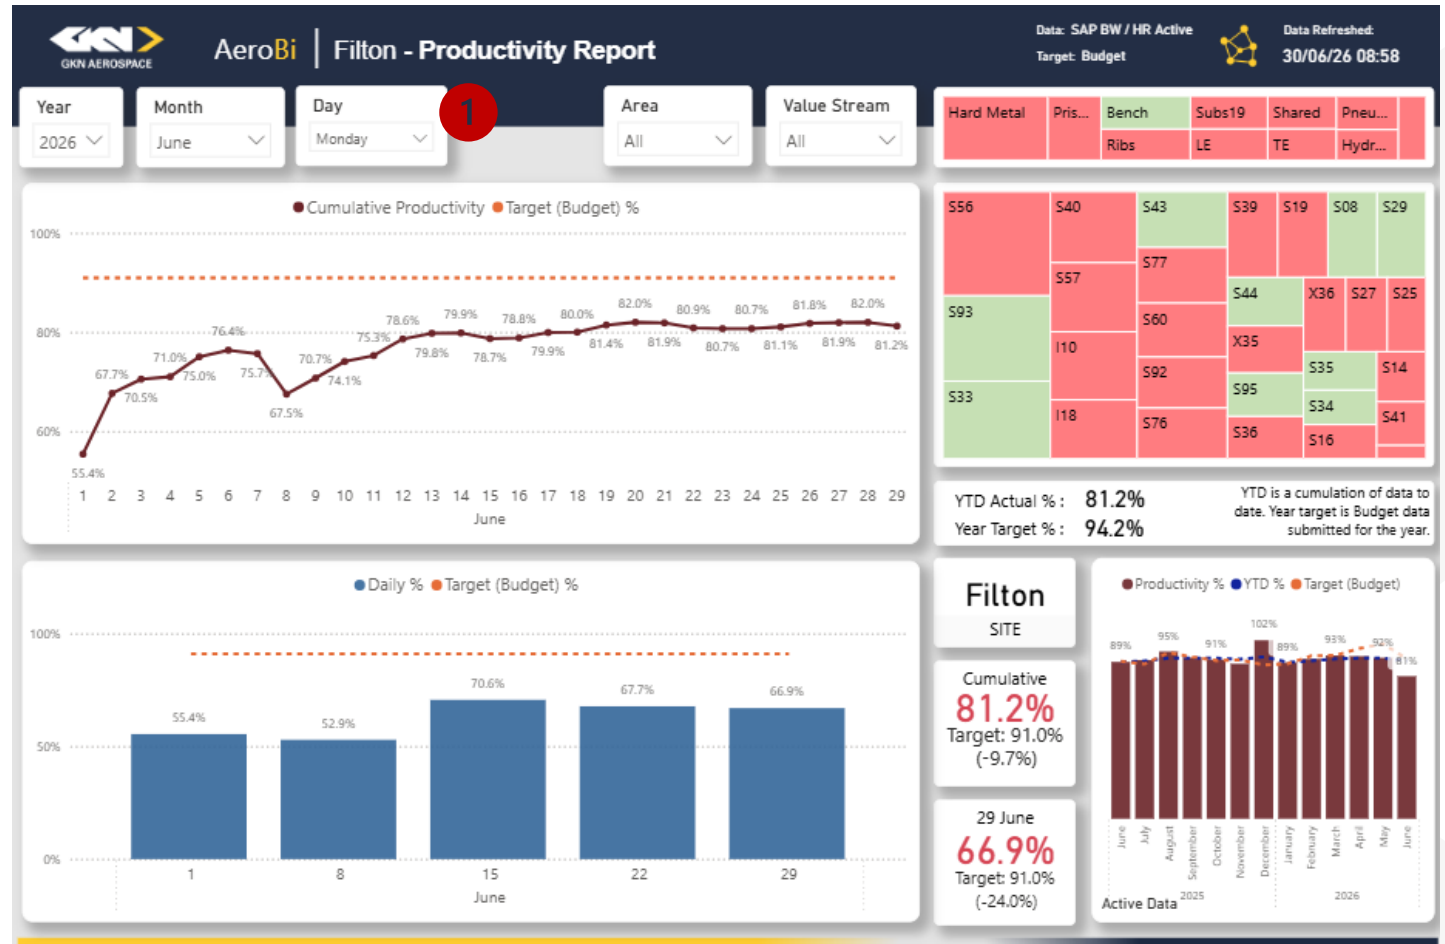

$$\text{Lost Time} = (\text{Earned hours} / \% \text{ Target}) - \text{Attended hours}$$

AeroBi Version 3 Update – Weekday Comparator

Day Filter

1 - Each page on the Operational Metrics Report now includes a filter that allows users to analyse how a specific day of the week has performed across the selected month.

This provides greater visibility of weekly performance trends and highlights any recurring patterns or changes across the month.

AeroBi – Version 3 Update

Exceptions - Indirects Function Targets

The red / green now gives a quick and clear visual of on or off target.

In addition, target lines are now visible over each function. Allowing business leaders to see how far from target their function is.

Targets are set at 2 hours per person per function.
